Accident Scene

Accident Sequence

- As airplane contacted berm, first officer shut down both engines
- Main batteries damaged during accident sequence
- Resulted in inoperable interphone and public address system
- First responder informed flight crew that left wing was leaking fuel

Safety Issues

- Excessive reverse thrust, which can cause rudder blanking
- Pilot braking action reports, which are subjective
- Lack of procedures for crew communication without operative communication systems

Safety Issues (cont.)

- Inadequate communication, coordination, and decision-making regarding evacuations
- Inaccurate passenger counts provided to emergency responders
- Unclear policies regarding runway friction measurements and runway condition reporting

Parties to Investigation

- Federal Aviation Administration
- Boeing
- Delta Air Lines
- Air Line Pilots Association
- The Port Authority of New York and New Jersey
